Subject: Employer statement

To Whom It May Concern,

During his two-month product development internship, Charles Zhao served as an embedded hardware engineering intern reporting to the product manager. He carried out his duties responsibly, was hardworking and reliable. He successfully completed all assigned engineering responsibilities, demonstrating outstanding overall performance.

During the internship, his main responsibilities included product development work such as optimizing and modifying multiple PCB boards for existing weighing instruments, mainly involving PCB changes for explosion-proof areas. Another key task was independently designing a brand-new PCB to support the communication protocol of a new digital scale, completing embedded program design and development based on the STC microcontroller, as well as building PC-side communication testing software and finishing equipment integration and functional testing. He proactively tracked the project progress throughout, paid close attention to details, and showed a high level of responsibility.

In the workplace, he demonstrated good professional qualities and teamwork awareness, was proficient in various software and AI tools, actively coordinated with the development team on project requirements, communicated challenges effectively, and collaborated to get tasks done. He helped to push the project to completion, and the product, after testing, was successfully launched, making a great addition to our product line.

During this internship, he achieved outstanding results and worked efficiently, completing what was originally planned as nearly six months of work in just two months. His performance was impressive, significantly reducing future debugging time and manpower costs, showing solid professional skills and excellent practical abilities. He is a highly capable and well-rounded intern.

Best regards

Minebea Intec Industrial Weighing Equipment (Beijing) Co., Ltd
